

Updated March 12, 2014

Abstract

This document provides information and resources that explain how FXCM implements and integrates the FIX Protocol specification for the FXCM Trading applications and interfaces.

FXCM – FIX Introduction

1.1.Overview

Price takers are allowed to connect their trading systems to FXCM trading systems via FIX engines or Trading SDK java and C++ libraries. The provided interfaces will be sufficient enough to build buyer systems that mimic the functionality of the Trading Station. Tools like Market and Conditional orders, account, open and closed position screens will be supported in full.

In the FXCM business model, there are three sides that participate in business flow: buyer (trader), market (the Trading System) and market maker (FXCM Dealing Desk or third party Trading System).

FXCM trading process is based on the fact that the user role and trading scope are defined on the Trading System side. Trading Server (the market) sends most of the messages in solicited manner to every Trader and Dealer Desk depending on their scope. So the Trader will receive Execution Reports related to the account that he trades, and related to the Dealing Desk console and trading instruments (known in FIX as security) that it handles.

The parties of the FXCM System (Trader - Market and Dealing Desk - Market) communicate with each other through a set of business objects that correspond to a set of FIX application messages as follows:

Table 1. Business objects and Fix message Types

Business Object	Fix Message	
Order	NewOrderSingle, ExecutionReport	
Open Trade (aka ticket, aka position)	PositionReport	
Closed Trade	PositionReport	
Account	CollateralReport	
Offer	Quote, MarketDataSnapshotFullRefresh	
Instrument	Security Status	
System Parameter	TradingSessionStatus (incorporate whole list of System Parameters)	
Mail	Email	

After successful logon to the system, any console (both Trader's and Dealing Desk's) can obtain the current status of the Market. This includes the current state of the Trading Session, current prices, list of positions, accounts and orders. Also, after logon, it is possible that the console will receive email message(s) that were not received during the previous communication session. As was mentioned above, no continuous subscription requests are required, and they are not supported. All of the following updates on business entities will be sent to the console in accordance with the connected user permissions. However, the messaging framework supports a set of flags to block the distribution of unsolicited messages.

FXCM tradable quoting model

As one of the largest registered forex brokers, FXCM has access to some of the best prices available for more than two dozen currency pairs. These prices are actual tradable prices; they are based on real bids and offers currently available.

FXCM's No Dealing Desk execution system is designed to show you the best available price to buy and sell currently available to FXCM from the multiple global banks that feed prices into our system. Having multiple prices provided to FXCM by several of the world's largest financial institutions means that you will see very tight, variable spreads, with precision down to as much as 1/1000th of a cent.

The Trader responds to the market with a trading order that could be filled, and the result of this trade could affect an end user's open position blotters and accounts (as per FIX: "continuously quoted market messaging scenario"). There could be limitations on quantity or price. Received Orders that are within the limits set by the market will execute against the quote automatically. If the order is outside the limits specified by the market, the order is forwarded to the Dealing Desk to accept, cancel, or re-quote. The purpose of Order Re-quote is to force the Trader to use a recent market state. When that is required, the Dealing Desk issues an indicative quote for a particular Trader, and the Trader could respond with an updated order request (or simply cancel the quote). In the same manner, the Dealing Desk issues indicative quotes in response to the Trader's Request-for-Quote.

This is where FXCM and the FIX "Quote on demand message scenario" differ. FIX requires that on-demand quotes are tradable and applied to market; FXCM on-demand quotes are indicative, do not affect the market quotes, and work only for that particular Trader. Request for quote processing is not supported currently with the Buyer Interface, however it is described here to help exhibit the FXCM System functionality in full.

The aforementioned scenarios of the FXCM quoting model are detailed with following diagrams.

Order processing details

Supported Time In Force (59)	Description
'1' Good Til Cancel (GTC)	Orders with this time in force will remain open and active until fully executed or canceled by the client.
'0' DAY (or session)	Orders with this time in force will remain open and active until fully executed or canceled by the client or the current trading session ends
'3' Immediate Or Cancel (IOC)	Orders With this time in force will attempt to execute immediately, allowing partial fills.
'4' Fill Or Kill (FOK)	Orders with this time in force will attempt to execute the full quantity immediately with no partial fills.
'6' Good Till Date (GTD)	Orders with this time in force will remain open and active until fully executed or canceled by the client or expiration date or time is reached

The FXCM buyer side interface provides support of the following order types:

A Market Order is an order to buy or sell immediately at the available price. These orders do not guarantee a price, but they do guarantee the order's execution. One important thing to

2 8 of 84

remember is that the last-traded price is not necessarily the price at which the market order will be executed. A Market Order could be assigned to an existing position; in this case filling of the order would close (or partially close) the assigned position. GTC, DAY, GTD, IOC, FOK are allowed.

A **Stop-Limit Order** is an order to buy or sell that combines the features of a stop order with those of a limit order. A stop-limit order will be executed at a specified price(or better) after a given stop price has been reached. Once the stop price is reached, the stop-limit order becomes a limit order to buy or sell at the limit price or better. GTC, DAY, GTD, IOC, FOK allowed.

A **Previously Quoted Order** is an order to buy or sell immediately with the last-published price or quote. The Quote ID that accompanies the order is used to validate the order price. IOC, FOK allowed.

A **Limit Order** is an order to buy or sell a predetermined amount at a specified price. This order will be filled only when the market price equals the specified limit price or better. Limit orders also allow a trader to limit the length of time an order can be outstanding before being canceled with following time in force values GTC, DAY, GTD, IOC, FOK

When GTC is specified, the Limit Order remains dormant until a limit price is passed. The FXCM trading system usually restricts the Trader from placing a limit order within a range close to the current market price.

When DAY is specified, the Limit Order remains dormant until a limit price is passed or automatically expires at the end of the current trading session. The FXCM trading system usually restricts the Trader from placing a limit order within a range close to the current market price.

When GTD is specified, the Limit Order remains dormant until a limit price is passed or automatically expires when the expire date or time is reached. The FXCM trading system usually restricts the Trade from placing a limit order within a range close o the current market price.

An IOC/FOK Limit Order is useful technique to buy-sell at specified price during a high volatility market. The IOC/FOK order will be filled only if current market price is equal or better then the specified price or rejected with system in other case.

A Limit Order can be assigned to an existing position (to "limit a trade profit"); A Closing Limit Order could be GTC,DAY,GTD,IOC,FOK only. GTC Closing Limit Order will close the position in full and an IOC/FOK order could work for a partial closing.

A **Stop Order** is placing to buy or sell with a predetermined amount at a specified price. The Order will be filled only when the market price equals a specified stop price or worse. The lifetime of Stop orders can be defined as GTC,DAY,GTD, IOC/FOK is not applicable for Stop Orders

2 9 of 84

A Stop Order remains dormant until the stop price is passed. The FXCM trading system usually restricts the Trader from placing a limit order within a range close to the current market price.

A Stop Order can be assigned to an existing position (to "stop a trade loss"); in this case, filling of the order will close (in full only) the assigned position. A closing Stop Order can be GTC only.

Trailing Stop Peg Order is representing a stop order with a stop price pegged to trail a specified distance behind the last sale price. The price of a trailing stop to buy can never increase, and the price of a trailing stop to sell can never decrease. Trailing Stop Peg Order is usually assigned to a trading position and work to close position in full. In additional to Fix defined PegInstructions FXCM using special field FXCMPegFluctuatePts that defines the number of points that Market Prices must move in order for the Trailing Stop to move.

The following table describes how FXCM uses its own enumeration of order types that match to FIX order types mentioned above:

*FXCM PREFIX = 9000, e.g. FXCM+10 = 9010

Table 3. Mapping of order types

FXCMOrdType (FXCM+50)	OrdType (39)	Description
Open (O)	Previously quoted (D)	Order created based on received price, expected immediately execution.
Phone Open (OF)	Market (1)	Unsupported in Buyer Interface but it could be generated by FXCM Dealing Desk.
Open Market (OM)	Market (1)	Order has no price specified, expected immediately execution with current market price. Order will stay open until quantity is fully filled or cancelled.
Open Limit(OL)	Limit (2)	IOC Order has price specified, expected immediately execution if order price confirmed with market otherwise rejected.
Open Requote (OQ)	Previously quoted (D)	Using as response on order re-quote.
Open Range (OR)	Stop Limit (4)	Order known as stop-limit order
Range Entry (RE)	Stop Limit (4)	Order known as stop-limit order
Range Trailing Entry (RTE)	Peg (P)	Order known as stop-limit order
Close (C)	Previously quoted (D)	Order created based on received price, expected immediately execution. Attached to an existing position.
Phone Close (CF)	Market (1)	Unsupported in Buyer Interface but it could be generated by FXCM Dealing Desk. Attached to an existing position.
Close Market (CM)	Market (1)	Order has no price specified, expected immediately execution with current market price. Attached to an existing position.
Close Limit (CL)	Limit(2)	IOC Order has price specified, expected immediately execution if order price confirmed with market otherwise rejected. Attached to an existing position.
Close Requote(CQ)	Previously quoted (D)	Using as response on order re-quote. Attached to an existing position.
Close Range (CR)	Stop Limit (4)	Order know as stop-limit order
Entry Limit (LE)	Limit (2)	GTC Order has price specified, expected execution when market hits order price.
Entry Stop (SE)	Stop (3)	GTC Order has price specified, expected execution when market hits order price.
Limit (L)	Limit (2)	GTC Order has price specified, expected execution when market hits order price. Attached to an existing position.
Stop (S)	Stop (3)	GTC Order has price specified, expected execution when market hits order price. Attached to an existing position.
Trailing Stop (ST)	Peg (P)	Attached to an existing position
Margin Call(M)	Market (1)	System side generated order. Attached to an existing position.
Equity Stop (Q)	Market (1)	System side generated order. Attached to an existing position.

2 10 of 84

Trailing Limit (LT)	Peg (P)	Attached to an existing position	
Limit Trailing Entry(LTE)	Limit (2)	Trailing entry order order	
Stop Trailing Entry(STE)	Stop (3)	Trailing entry order	

Also FXCM business logic defines a greater set of possible order statuses than FIX, as exhibited in the following table:

Table 4. Mapping of order statuses

FXCMOrdStatus	OrdStatus	Description
(FXCM+51)	(39)	
Waiting (W)	New (0) or Replaced (5)	Conditional order inactive state
In process (P)	New (0)	Order in process validating against of market
Dealer Intervention (I)	New (0)	Order in process validating via dealing desk
Requoted (Q)	Rejected (8)	Order re-quoted with dealing desk. Waiting for reaction of
Requoted (Q)	Rejected (6)	trader.
Executing (E)	Stopped 7)	Order in process execution
Cancelled (C)	Cancelled (4)	Order deleted by liquidity provider
Rejected (R)	Rejected (8)	System rejected an order for any reason, for example it did not
Rejected (R)	Rejected (6)	pass initial validation
Expired (T)	Expired (C)	Order expired
Executed (F)	Filled (2)	Order executed
Pending Calculated (U)	Stopped (7)	Order in process of execution in counter party platform
Pending Calculated (U)	Partially Filled (1)	Order partially executed
		Conditional Order in process of (possible) execution of other
Pending Cancel (S)	Pending Cancel (6)	part of oco order batch; Virtual status of any order type in case
-	- ()	of order reject or cancellation.
Pending Cancel Calculated(H)	Pending Cancel (6)	Order is request to delete by user, but in process of execution

The Following diagrams illustrate the transitions of Order status for different types of Orders. A blue line shows specifics of Non-Dealing Desk execution, red one shows specifics of Dealing Desk Execution mode.

3		Execution(X)	Trade	Partial Fill	100	30	70	30
4		Execution(X)	Trade	Partial Fill	100	50	50	20
5		Execution(X)	Trade	Partial Fill	100	60	40	10
6		Execution(X)	Cancelled	Cancelled	100	60	0	0

Partial Fill Example - complete fill

Time	Message	Message Sent	Exec	OrdStatus	Order	Cum	Leaves	Last
	Received		Type		<u>Qty</u>	<u>Qty</u>	<u>Oty</u>	<u>Qty</u>
1	New Order(X)				100			
2		Execution(X)	New	New	100	0	100	0
3		Execution(X)	Trade	Partial Fill	100	30	70	30
4		Execution(X)	Trade	Partial Fill	100	50	50	20
5		Execution(X)	Trade	Filled	100	100	0	50

Figure 10. Example Partial Fill Table

Contingency orders overview:

"Contingency orders, such as a One-Cancels-Other (OCO), consist of two or more orders whose behavior is contingent on each other. Contingent orders are also known as 'alternative', 'either-or'

2 15 of 84

or 'linked' orders. A contingent order is an order whose execution is dependent upon the execution of another order as part of a stipulated execution condition." ¹

There are 4 contingency types defined:

- One Cancels the Other (OCO)
- One Triggers the Other (OTO)
- One Updates the Other (OUO) Absolute Quantity Reduction
- One Updates the Other (OUO) Proportional Quantity Reduction

Instead of OUO(s), FXCM supports an order group called "Entry with Limit and Stop" (ELS). This group describes traditional FXCM system functionality, where a user can specify a Stop and a Limit that are attached directly to the ticket that is opened when the associated Entry order is executed. The Stop and Limit are similar to OCO orders, in that either one (or both) is canceled when the ticket is closed fully. The Stop and Limit quantity also will be reduced if the ticket is closed partially.

FXCM system supports three Contingency Types: OCO, OTO and ELS.

OCO order

"An OCO order is an order whose execution results in the immediate cancellation of another order linked to it. Cancellation of the Contingent Order happens on a best efforts basis. In an OCO case, both orders are live in the marketplace at the same time. The execution of either order triggers an attempt to cancel the unexecuted order. Partial executions will also trigger an attempt to cancel the other order."

Using Notes:

- Only Entry conditional orders can be OCO (Limit Entry or Stop Entry)
- OCO orders work only within the same account
- No peg order supported
- Day or Good Till Cancel (GTC) Time In Force are supported

Additional reference IDs:

- *ListId* client defined id of OCO order bulk
- *ContingencyId* system based id of OCO order bulk

FXCM system *does not* support possibility to embed OCO orders within other contingent order bulk. *ContingencyId* makes OCO order group unique within the system.

ListId is using to indicate an initial contingent order group only, consistency of reference *ListId* - *ContingencyId* is not guaranteed while of order full life cycle.

2 16 of 84

¹ FIX Version 5.0 Service Pack 1 - VOLUME 4

OTO Order

An OTO contingent order involves two (or more) orders - a primary order and a secondary order(s).. The primary order is an active order on the market. The secondary order(s) is out of the market, thus inactive. If the primary order executes in full, the secondary order(s) is released to the market and becomes active. **Secondary order(s) still remaining inactive until primary order executed in full** even in case when execution engine resets remaining quantity via insufficient market liquidity. After activation secondary orders loses grouping around of primary order (the order executed and never exits), so there is no OTO active secondary order: they became to be regular entry orders.

Using Notes:

- Ether an Entry Order or a Market Order can be a primary order.
- Only Entry Order can be a secondary order.
- OTO order works only within the same account
- Day or GTC Time In Force are supported, when primary order expired all related secondary orders expired; expiration time for secondary DAY orders sets on their activation
- Primary order could be an "IF" order, without quantity assigned
- Quantity of secondary orders is not reflecting to filing of primary order,
- Secondary order quantity is not depending on primary order at any time.
- Cancel of primary order will eliminate all related secondary orders.
- OTO orders cannot be attached to an ELS secondary order
- One primary order can have ELS and OTO secondary orders attached simultaneously

Additional reference IDs:

- **ListId** is not in use
- *ContingencyId* system side id of OTO order bulk, applied only to secondary order.
- *ClOrdIdLink* client side reference to primary order (on a secondary order)

FXCM system supports possibility to embed OTO orders within other contingent order bulk. *ContingencyId* groups OTO secondary orders around a primary order; however *ContingencyId* is not the same as primary order id. Virtually, primary order can exist in two contingent groups: as a primary order within OTO order bulk, and as secondary order within up level OTO group (or as one of orders within OCO group)..

ClOrdIdLink is using to indicate a reference between secondary and primary orders within initial contingency group where *ContingencyId* is not defined yet. Persistence of reference *ClOrdIdLink* - *ContingencyId* is not guaranteed while of order full life cycle.

2 17 of 84

ELS Order

An ELS contingent order involves two (or three) orders - a primary order and a secondary order(s). Secondary order(s) can be Limit or Stop. Secondary order(s) has the same quantity as the primary order and side that opposite to the primary order (if primary order is "Sell" then secondary order is "Buy").

In case when the primary order is an active order on the market - the secondary order is inactive. When primary order is executed, secondary orders became be active and work like OCO orders but cannot be maintained in the same way; secondary orders could be removed or added to the ELS bulk only.

Summary of executed quantity of active secondary ELS orders cannot exceed net position for the same account and same instrument.

Cancel of primary order results elimination of secondary orders. Primary order can be any order type as entry as well as market.

There are two modes of ELS Order workflow, depending on the account settings: position maintenance disabled (to complain NFA FIFO rules) and position maintenance enabled (traditional logic when closing order can be attached to exciting position).

Position Maintenance Disabled (FIFO rules)

When the primary order is executed in full, the secondary order(s) is activated in full.

In case of primary order partially fills there would be a number of ELS pairs accompanying primary order executions. When part of the primary order is executed, the system issues a new active order(s) that corresponds to secondary order(s) with quantity equal to filled quantity. The quantity of original secondary order reduced to remaining quantity of the primary order. When the remaining quantity of primary order is executed in full, the secondary order(s) is activated with remaining quantity.

Secondary orders after their activation work like OCO orders, full execution of Limit order cancels Stop, and full execution of Stop cancels Limit. However in a case of partial fill of one of secondary orders reduce a quantity of other order up to remaining quantity of executed order in a way that the quantity of active ELS orders always the same. Rejection or cancel of one of secondary order do NOT cause elimination of second order.

2 18 of 84

Executed quantity of secondary ELS order cannot exceed net position for the same account and same instrument. When net position released in full all remaining active ELS orders related to the position are canceled.

FIFO ELS workflow is possible for accounts with setting including day and true netting position maintenance but excluding "both sides" position maintenance.

Using Notes:

- Ether an Entry Order or a Market Order can be a primary order.
- Only an Entry Order can be a secondary order.
- An ELS order works only within the same account and same instrument
- One of the secondary orders should be a Limit order and the other should be a Stop
- The quantity of secondary orders should be the same as primary order.
- The side of secondary order is opposite to primary order (if primary order is "Sell" then secondary "Buy", if primary is "Buy", secondary is "Sell").
- Day or GTC Time In Force are supported, when primary order expired all related secondary orders expired; expiration time for secondary DAY orders sets on their activation
- The partial close of position issued via primary order (or its part) would not effect to any active secondary order(s). There is no straight reverence position closing order, secondary orders would be executed based on FIFO rules. However system will not execute secondary ELS order with quantity exceed net position. Remaining ELS orders would be canceled when position became flat.
- One primary order can have ELS and OTO simultaneously

Additional reference IDs:

- ListId client defined id of ELS order bulk in active phase of secondary orders
- *ContingencyId* system side id of ELS order bulk, applied only to secondary order.
- *ClOrdIdLink* client side reference to primary order (on a secondary order)

FXCM system supports possibility to embed ELS orders within other contingent order bulk. In ELS group *ContingencyId* represents reference to a primary order and can be applied only to secondary order(s). *ContingencyId* on primary order can be referencing to other contingent order group. So virtually, primary order can exist in two contingent groups: as a primary order within ELS order bulk, and as secondary order within up level OTO group (or as one of orders within OCO group). In other words *ContingencyId* groups ELS secondary orders around primary order.

ClOrdIdLink is using to indicate a reference between secondary and primary orders within initial contingency group where ContingencyId (primary order id in this case) is not defined yet. Persistence of reference ClOrdIdLink - ContingencyId is not guaranteed while of order full life cycle.

2 19 of 84

ListId is using to indicate an initial contingent order group only for active phase of secondary order (when no primary order exists on a system), consistency of reference *ListId* - *ContingencyId* is not guaranteed while of order full life cycle.

Position Maintenance Enabled (Traditional)

In this case, when part of the primary order is executed, the system attaches a new secondary order to the new open position ticket, and the quantity of the secondary order is equal to that of the open position. The quantity of the original secondary order is then reduced to equal the remaining quantity of the primary order.

When the primary order (or its remaining quantity) is executed in full, the secondary order(s) is activated and attached to a new position.

Traditional ELS workflow possible for accounts with single position maintenance enabled only. (Position Maintenance set to one or both sides, and closing orders are enabled)

Summary of executed quantity of active secondary ELS orders cannot exceed net position for the same account and same instrument.

Using Notes:

- Ether an Entry Order or a Market Order can be a primary order.
- Only a Closing Order can be a secondary order.
- An ELS order works only within the same account and same instrument
- One of secondary orders should be a Limit order and another is Stop
- The quantity of secondary orders should be the same as primary order.
- The side of secondary order is opposite to primary order (if primary order is "Sell" then secondary "Buy", if primary is "Buy", secondary is "Sell").
- Day or GTC Time In Force are supported but only for primary order, when primary order expired all related secondary orders expired; secondary orders can by only GTC: they are exist while their position exist
- 'Full' execution means that order is filled in requested (remaining) quantity or up to quantity that possible by current marketplace liquidity..
- The partial close of position issued via primary order (or its part) reduces quantity of related closing order.
- After activation ELS secondary order quantity and side cannot be modified. But any order can be removed or added within ELS limitation. (One of order types Limit or Stop, opposite side and same quantity as in hosting position)
- One primary order can have ELS and OTO simultaneously

Additional reference IDs:

- **ListId** is not in use
- *ContingencyId* system side id of ELS order bulk, applied only to secondary order.
- *ClOrdIdLink* client side reference to primary order (on a secondary order)
- **PositionID** server side reference to a ticket issued via primary order

FXCM system supports possibility to embed ELS orders within other contingent order bulk. In ELS group *ContingencyId* represents reference to a primary order and can be applied only to secondary order(s). *ContingencyId* on primary order can be referencing to other contingent order group. So virtually, primary order can exist in two contingent groups: as a primary order within ELS order bulk, and as secondary order within up level OTO group (or as one of orders within OCO group). In other words *ContingencyId* groups ELS secondary orders around primary order. Orders within ELS bulk are associated with the same ticket when it is opened.

ClOrdIdLink is using to indicate a reference between secondary and primary orders within initial contingency group where **ContingencyId** (primary order id in this case) is not defined yet. Persistence of reference **ClOrdIdLink** - **ContingencyId** is not guaranteed while of order full life cycle.

Day and True Netting Position Maintenance

In these cases ELS workflow is the same as FIFO (and only FIFO) ELS workflow: no reference to a closing position is supported.

Closing Leg Interface

The FXCM System interprets FXCMRequest with closing Stop/Limit legs as ELS contingent orders and ELS workflow would be FIFO or traditional depending on account settings.

Contingency Type enumeration

For FIX API we have following enumeration:

- 1 One-Cancel-Other (OCO)
- 2 One-Trigger-Other (OTO)
- 101 Entry with Limit and Stop (ELS)

2 21 of 84

Add a list of entry orders to a new OCO Contingency group

Initiator	Direction	Receiver
Send New Order – List message with 2 orders in repeating roup. ContingencyType is set to OCO.	→	Receive list and associate 2 orders with an OCO condition and a single ContingencyID
Receive Execution Report	←	If rejected, send ExecutionReport for each order.
Receive Execution Report	←	If accepted, receive Execution Report for each order with the same ContingencyID.

2 22 of 84

Remove a single entry order from an existing OCO Contingency group

Initiator	Direction	Receiver
Send OrderCancelReplaceRequest	\rightarrow	Receive OrderCancelReplaceRequest With contingencytype absent and contingencyid supplied.
Receive ExecutionReport	←	If rejected, send ExecutionReport
Receive ExecutionReport update with absent ContingencyID	←	Remove order from OCO group, and send update ExecutionReport with absent ContingencyID

2 23 of 84

Add a single entry order to an existing OCO Contingency group

Initiator	Direction	Receiver
Send OrderCancelReplaceRequest	→	Receive OrderCancelReplaceRequest With contingencytype absent and contingencyid supplied.
Receive ExecutionReport	←	If rejected, send ExecutionReport
Receive ExecutionReport update with absent ContingencyID	←	Remove order from OCO group, and send update ExecutionReport with absent ContingencyID

Add a single entry order to a new OCO Contingency group

 Initiator
 Direction
 Receiver

 Send OrderCancelReplaceRequest
 →
 Receive OrderCancelReplaceRequest with ContingencyType of OCO and ContingencyID absent.

 Receive ExecutionReport
 ←
 If rejected, send ExecutionReport

 Receive ExecutionReport
 ←
 If accepted send ExecutionReport update with new ContingencyID

FIX Application messages

1.2.Overview

The Following table lists the set of messages supported by the FXCM Buyer Interface:

Message type	Code	Description

2 25 of 84

Message type	Code	Description
		Other. Common
Business Message	ʻj'	The Business Message Reject message can reject an application-level message which fulfills
Reject	J	session-level rules and cannot be rejected via any other means
		Other. User Administration
User Request	BE	This message is used to verify user password and request list of trading sessions
User Response	BF	This message is used to respond to a user request message
		Pre-Trade .Event Communication
Email	С	The email message is a general free format message between the dealer and trader
		Pre-Trade .Quotation/Negotiation
Quote Response	AJ	The Quote Response message is used to respond to a Quote message
Quote	S	The Quote message is used as the re-quote an market order
		Pre-Trade .Market Data
Market Data –		The Market Data messages sending in unsolicited manner with updates of market prices. FIX
Snapshot / Full	W	connections are subscription based.
Refresh		
MarketDataRequest	V	Request for current market data and subscribe
		Pre-Trade Security and Trading Session Definition /Status
SecurityListRequest	X	Requests security list for specified criteria
SecurityList	Υ	Contains trading security repeating group response to security list request
SecurityStatusRequest	E	Requests the security status for the specified criteria
Security Status	'f'	The Security Status message provides the ability to report changes in status of a security. FIX connections are subscription based.
Trading Session Status Request	ʻg'	The Trading Session Status Request is used to request information on the status of a market.
Trading Session	ʻh'	The Trading Session Status provides information on the status of a market. FXCM expanded this
Status		message with Security list and FXCM system parameters. FIX connections are subscription based.
		Trade. Single /General Order Handling
New Order – Single	D	The new order message type is used by trader wishing to electronically submit forex orders to FXCM system for execution
New Order – List	Е	A repeating group of new order messages submitted for execution
Execution Report	8	Multipurpose message for counterparty notification related to order execution
Order Cancel/Replace	G	· · · · · · · · · · · · · · · · · · ·
Request	G	The order cancel/replace request is used to change the parameters of an existing order.
Order Cancel Request	F	The order cancel request message requests the cancellation of an existing order
Onder Consel Deiest	9	The order cancel reject message is issued when cancel request or cancel/replace request message
Order Cancel Reject	9	cannot be honored
Order Mass Status Request	AF	The order mass status request message requests the status for orders matching criteria specified within the request.
OrderStatusRequest	Н	This requests order status matching criteria specified within the request.
		Post-Trade. Position Maintenance
Request For Positions	AN	The Request for positions message requests the trading position status matching criteria specified within the request.
Request for Positions Ack	AO	Uses to accommodate batch of position reports
Position Report	AP	Describes status of trading position (as open as closed). FIX connections are subscription based.
		Post-Trade. Collateral Management
Collateral Report	ВА	Uses to report status of FXCM account. FIX connections are subscription based.
Collateral Inquiry	BB	The Collateral Inquiry message requests the FXCM account status matching criteria specified within the request.
Collateral Inquiry Ack	BG	Uses to accommodate batch of Collateral Reports
Conditional iniquity ACK	50	0303 to accommodate paten of Conateral Neports

4.1.1. Trading Session Status and Securities (System parameters and instruments)

In short, TradingSessionStatus is an object that indicates the current status of the Market. Together with the set of System Parameters, it includes a list of available traded instruments (aka Securities). An update of a System Parameter produce an entire TradingSessionStatus, but updates on any instrument will be propagated with the help of SecurityStatus message.

Figure 10. Trading Session Status / Security Status message flow

4.1.2. Execution Report (Orders)

The list of orders that are currently active can be retrieved with the OrderMassStatusRequest, as illustrated in following diagram:

Figure 11. Execution Report message flow

4.1.3. Position Report (Positions)

Open/Closed trades (positions) should be obtained as a batch of PositionReport messages with a leading RequestForPostionsAck message, as required by FIX specification:

Figure 12. Position Report message flow

4.1.4. Collateral Report (Accounts)

The account list and account updates are supported by the CollateralReport message, as explained in following diagram:

Figure 13. Collateral Report

4.1.5. Order Maintenance Requests

Along with order processing it is possible to maintain inactive orders. FXCM does not allow changes to order quantity but changes of order price for conditional orders are permitted, in addition to order removal.

2 29 of 84

Figure 14. Order Maintenance

4.1.6. Negative Responses

The above diagrams showed only positive scenarios, however there is a list of possible cases on the business level when a negative response will be produced, as described in the following table:

	Table 2. Messages with negative responses
In response to	Appropriate Response
Message with unsupported type Message that lacks a field conditionally required by the FIX	Business Message Reject (i)
Market Data Request (V)	Market Data Request Reject (Y)
Trading Session Status Request (g)	Trading Session Status (h)
New Order – Single (D) Order Mass Status Request (AF)	Execution Report (8)
Order Cancel Request (F) Order Cancel/Replace Request (G)	Order Cancel Reject (9)
Request for Positions (AN)	Request for Positions Ack (AO)
Collateral Inquiry (BB)	Collateral Inquiry Ack (BG)

1.3.Message structure

This section includes the defined structure of all supported application messages, described in the way FXCM uses them. A Colored field indicates a field specifically added by FXCM.

Also, in the following tables, the use of message fields in different scenarios is defined. For request messages (from trader to system) "Y" means expected and required and "N" means fields that are not in use. For response and unsolicited messages (from server to trader) "Y" means this

2 30 of 84

field is provided and "N" means this field is missed or the server does not guarantee that the field value is filled

1.3.1. Custom Fields

In addition to FIX fields, application messages use special custom fields: *FXCM PREFIX = 9000, e.g. FXCM+10 = 9010

Field ID (TAG)	Field Name	Data type	Description
FXCM+0	FXCMSymID	Integer	Instrument, Forex instrument ID within FXCM instrument name space (offer id)
FXCM+1	FXCMSymPrecision	Integer	Precision of prices (pip size) e.g. 5 for EUR/USD and 3 for USD/JPY
FXCM+2	FXCMSymPointSize	Float	Size of price point e.g. 0.0001 for EUR/USD and 0.001 for USD/JPY
FXCM+3	FXCMSymInterestBuy	Float	Interest Rate for sell side open positions
FXCM+4	FXCMSymInterestSell	Float	Interest Rate for buy side open positions
FXCM+5	FXCMSymSortOrder	Integer	Sorting index of instrument
FXCM+6	RESERVED FOR FUTURE USE		
FXCM+710	Reserved		Reserved for instrument definition
FXCM+11	FXCMTimingInterval	Integer	Not in use for Buyer Interface
FXCM+12	FXCMStartDate	UTCDate	Used in Historical Snapshots RequestForPositions
FXCM+13	FXCMStartTime	UTCTimeOnly	Used in Historical Snapshots RequestForPositions
FXCM+14	FXCMEndDate	UTCDate	Used in Historical Snapshots RequestForPositions
FXCM+15	FXCMEndTime	UTCTimeOnly	Used in Historical Snapshots RequestForPositions
FXCM+16	FXCMNoParam	Integer	Number of custom parameter within list
FXCM+17	FXCMParamName	String	Parameter name
FXCM+18	FXCMParamValue	String	Parameter value
FXCM+19	FXCMServerTimezone	Integer	Server time zone (number of hours from UTC)
FXCM+20	FXCMContinuousFlag	Integer	FXCMContinuousFlag
FXCM+21	FXCMNoSnapshot	Integer	Not in use for Buyer Interface
FXCM+22	FXCMPageID	String	Not in use for Buyer Interface
FXCM+23	FXCMPageviewID	Integer	Not in use for Buyer Interface
FXCM+24	FXCMPageviewLifetime	Integer	Not in use for Buyer Interface
FXCM+25	FXCMRequestRejectReason	Integer	Request Rejection Reason Code. Valid values: 0 = Unknown 1 = Generic 2 = Data not found 3 = Trading session not found 4 = Other
FXCM+26	FXCMPageIDNo	Integer	Not in use for Buyer Interface
FXCM+27	FXCMClientExtra	String	Not in use for Buyer Interface
FXCM+28	FXCMCommandID	String	Not in use for Buyer Interface
FXCM+29	FXCMErrorDetails	String	Error details of server side processing
FXCM+30	FXCMServerTimeZoneName	String	Server time zone name
FXCM+31	FXCMSessionManagerID	String	Not in use for Buyer Interface
FXCM+32	FXCMTopicID1	String	Not in use for Buyer Interface
FXCM+33	FXCMTopicID2	String	Not in use for Buyer Interface
FXCM+34	FXCMTopicID3	String	Not in use for Buyer Interface
FXCM+35	FXCMTopicID4	String	Not in use for Buyer Interface
FXCM+36	Reserved		
FXCM+37	Reserved		
FXCM+38	FXCMUsedMargin	Float	Amount of used margin nominated for an account or position (liquidation level)

2 31 of 84

Field ID (TAG)	Field Name	Data type	Description
FXCM+39	Reserved		
FXCM+40	FXCMPosInterest	Float	Amount of interest applied to the position
FXCM+41	FXCMPosID	String	Trading Position ID (aka Ticket number)
FXCM+42	FXCMPosOpenTime	UTCTimestamp	Time when trading position was opened
FXCM+43	FXCMCloseSettlPrice	Float	Closing price of trading position
FXCM+44	FXCMCloseTime	UTCTimestamp	Time when trading position was closed
-			Milestones status of account from risk management point of
			view. Valid values:
			N – account has no problems
FXCM+45	FXCMMarginCall	String	Y – account reached liquidation margin call
1 AOWITTO	1 Nowwarginoan	Ottilig	W – maintenance margin alert
			Q – equity stop
			A – equity slop A – equity alert
FXCM+46	FXCMUsedMargin3	Float	Amount of used margin nominated for an account or position (maintenance level)
FXCM+47	FXCMCashDaily	Float	Non-trade related daily activity on the account (uses for daily
1 ACIVIT41	1 ACIVICASIIDAIIy	ı ioat	equity based risk management)
FXCM+48	FXCMCloseClOrdID	String	ClOrdID of the order that closes a position
FXCM+49	FXCMCloseSecondaryClOrdID	String	SecondaryClOrdID of the order that closes a position
	<u>.</u>	•	FXCM order type code
			Valid values:
			O = Open
			OF = Phone Open
			OM = Open Market
			OL = Open Limit
			OQ = Open Requote
			OR = Open Range
			C = Close
			CF = Phone Close
FXCM+50	FXCMOrdType	String	CF = Phone Close CM = Close Market
		_	
			CQ = Close Requote
			CR = Close Range
			LE = Entry Limit
			SE = Entry Stop
			L = Limit
			S = Stop
			ST = Trailing Stop
			M = Margin Call
			Q = Equity Stop
			FXCM order status code
			Valid values:
			W = Waiting
			P = In process
			I = Dealer Intervention
			Q = Requoted
FXCM+51	FXCMOrdStatus	String	E = Executing
		-	C = Cancelled
			R = Rejected
			T = Expired
			F = Executed (Filled)
			U = Pending Calculated
			S = Pending Cancel
		String	Profit Loss amount that calculated on the postion
FXCM+52	FXCMClosePNL		
FXCM+52 FXCM+53	FXCMClosePNL FXCMPosCommission	Float	Trading commission applied to the position
		Float String	Trading commission applied to the position Order ID of the order that closes a position
FXCM+53	FXCMPosCommission		Order ID of the order that closes a position Used in conjunction with Request For Positions message for
FXCM+53 FXCM+54 FXCM+60	FXCMPosCommission FXCMCloseOrderID FXCMMaxNoResults	String Int	Order ID of the order that closes a position Used in conjunction with Request For Positions message for Closed Positions Historical Snapshots
FXCM+53 FXCM+54 FXCM+60 FXCM+61	FXCMPosCommission FXCMCloseOrderID FXCMMaxNoResults FXCMPegFluctuatePts	String Int Int	Order ID of the order that closes a position Used in conjunction with Request For Positions message for Closed Positions Historical Snapshots Specifies the number trailing stop fluctuating points
FXCM+53 FXCM+54 FXCM+60 FXCM+61 FXCM+76	FXCMPosCommission FXCMCloseOrderID FXCMMaxNoResults FXCMPegFluctuatePts FXCMSubscriptionStatus	String Int Int String	Order ID of the order that closes a position Used in conjunction with Request For Positions message for Closed Positions Historical Snapshots Specifies the number trailing stop fluctuating points FXCM Subscription status (D/T/V/M)
FXCM+53 FXCM+54 FXCM+60 FXCM+61	FXCMPosCommission FXCMCloseOrderID FXCMMaxNoResults FXCMPegFluctuatePts	String Int Int	Order ID of the order that closes a position Used in conjunction with Request For Positions message for Closed Positions Historical Snapshots Specifies the number trailing stop fluctuating points

2 32 of 84

Field ID (TAG)	Field Name	Data type	Description
FXCM+80	FXCMProductID	Int	Product id (1-Forex, 2-Index, 3-Commodity, 4-Treasury, 5-Bullion, 6-Shares, 7-FXIndex)
FXCM+90	FXCMCondDistStop	Float	Condition distance for Stop order
FXCM+91	FXCMCondDistLimit	Float	Condition distance for Limit order
FXCM+92	FXCMCondDistEntryStop	Float	Condition distance for Entry Stop order
FXCM+93	FXCMCondDistEntryLimit	Float	Condition distance for Entry Limit order
FXCM+94	FXCMMaxQuantity	Float	Max quantity allowed
FXCM+95	FXCMMinQuantity	Float	Min quantity allowed
FXCM+96	FXCMTradingStatus	String	Security Trading Status: O-Open, C-Closed
269 (Extended value list)	MDEntryType	Char	Type Market Data entry. Valid values: 0 = Bid 1 = Offer 2 = not in use 3 = not in use 4 = (Bid) Opening Price 5 = (Bid) Closing Price 6 = not in use 7 = Trade Session High Price 8 = Trade Session Low Price 9 = not in use A = not in use B = Offer Opening Price C = Offer Closing Price D = Bid High Price E = Bid Low Price F = Offer High Price G = Offer Low Price
924 (Extended value list)	UserRequestType		Valid values: 1 = Logon User 2 = Logoff User 4 = User Status 5 = List of trading sessions

1.3.2. Common Components

	1.0.2.	Common Components	
		<standard header:<="" td=""><td>></td></standard>	>
Tag	Field Name	Req'd	Comments
8	BeginString	Υ	FIX.4.4 (Always unencrypted, must be first field in message)
9	BodyLength	Y	(Always unencrypted, must be second field in message)
35	MsgType	Y	(Always unencrypted, must be third field in message)
49	SenderCompID	Y	(Always unencrypted)
56	TargetCompID	Y	(Always unencrypted)
34	MsgSeqNum	Y	(Can be embedded within encrypted data section.)
57	TargetSubID	Y	(Can be embedded within encrypted data section.)
52	SendingTime	Y	(Can be embedded within encrypted data section.)
		<td>></td>	>

	<instrument></instrument>				
Tag	Field Name	Reg'd Comments			
55	Symbol	Y	Symbol is defined in "EBS" (Electronic Banking System) format: "CCY1/CCY2"		
460	Product	N			
231	ContractMultiplier	N	Specifies the ratio or multiply factor to convert from "nominal" units (e.g. contracts) to total units (e.g. shares) (e.g. 1.0, 100, 1000, etc).		
228	Factor	N	Base unit size for CFD		
461	CFICode	N	Indicates the type of security using ISO 10962 standard, Classification of Financial Instruments (CFI code) values.		

2 33 of 84

167	SecurityType	N	Indicates type of security for CFD
FXCM+0	FXCMSymID	N	Instrument ID from FXCM instrument naming space (use on Trade Session Status)
FXCM+1	FXCMSymPrecision	N	Precision of prices (use on Trade Session Status)
			1 \
FXCM+2	FXCMSymPointSize	N	Point size of prices (use on Trade Session Status)
FXCM+5	FXCMSymSortOrder	N	Sorting index of instrument
FXCM+79	FXCMContingencyID	N	Server/Sell Side Contingency ID
FXCM+80	FXCMProductID	N	Used in CFD, 1-Forex, 2-Index, 3-Commodity, 4-Treasury, 5-Bullion, 6-Shares, 7- FXIndex
FXCM+90	FXCMCondDistStop	N	Condition distance for Stop order
FXCM+91	FXCMCondDistLimit	N	Condition distance for Limit order
FXCM+92	FXCMCondDistEntryStop	N	Condition distance for Entry Stop order
FXCM+93	FXCMCondDistEntryLimit	Ν	Condition distance for Entry Limit order
FXCM+94	FXCMMaxQuantity	N	Max quantity allowed
FXCM+95	FXCMMinQuantity	N	Min quantity allowed
FXCM+96	FXCMTradingStatus	N	Security Trading Status: O-Open, C-Closed

			<orderqtydata></orderqtydata>
Tag	Field Name	Req'd	Comments
38	OrderQty	N	Order Quantity expressed in amount of position currency
516	OrderPercent	N	Indicates Net Quantity Order, 100% allowed

			•	<position qty=""></position>
Tag		Field Name	Req'd	Comments
702		NoPositions	N	Number of position entries, Always "1"
\rightarrow	703	PosType	Y	Type of Position Quantity, always "TQ"
\rightarrow	704	LongQty	N	Buy position quantity
\rightarrow	705	ShortQty	N	Sell position quantity
			<	:/Position Qty>

			<positi< th=""><th>on Amount Data></th></positi<>	on Amount Data>
Tag		Field Name	Req'd	Comments
753		NoPosAmt	Υ	Number of position entries, Always "1"
\rightarrow	707	PosAmtType	Y	Type of Position Amount, always "CASH"
\rightarrow	708	PosAmt	Y	Position Amount, always 0
			<td>ion Amount Data></td>	ion Amount Data>

				<partie< th=""><th>98></th></partie<>	98>
Tag		Fiel	d Name	Req'd	Comments
453		NoF	PartyIDs	N	Repeating group below should contain unique combinations of PartyID, PartyIDSource, and PartyRole
\rightarrow	4	48	PartyID	N	Used to identify source of PartyID. Required if PartyIDSource is specified. Required if NoPartyIDs > 0
\rightarrow	447		PartyIDSource	N	Used to identify class source of PartyID value (e.g. BIC). Required if PartyID is specified. Required if NoPartyIDs > 0.
\rightarrow	452		PartyRole	N	Identifies the type of PartyID (e.g. Executing Broker). Required if NoPartyIDs > 0.
\rightarrow	802		NoPartySubIDs	N	Repeating group of Party sub-identifiers.
→	→	523	PartySubID	N	Sub-identifier (e.g. Clearing Acct for PartyID=Clearing Firm) if applicable. Required if NoPartySubIDs > 0.
\rightarrow	\rightarrow	803	PartySubIDType	N	Type of Sub-identifier. Required if NoPartySubIDs > 0.
				Partie</td <td>es ></td>	es >

2 34 of 84

FXCM is using the "parties" component block to identify an end user account with FXCM specific information, such as account name, trader login, account ID, and account type:

Tag	Field Name			Value	Value Meaning
453	NoPartyIDs			1	
\rightarrow	448 Par		PartyID	FXCM ID	defines FXCM specific SubIDs within possible big list of Parties Ids
\rightarrow	4	47	PartyIDSource	D (Proprietary/Custom code)	
\rightarrow	4	52	PartyRole	3 (Client ID)	
\rightarrow	8	02	NoPartySubIDs	4	Number of Sub Ids

\rightarrow	→ 803 PartySubIDType		PartySubIDType	N	Y N 0 == Hedging No Hedging Netting

FXCM using peg instructions only to specify Trailing Stop Peg Order with PegMoveType = (0) Floating, PegOffsetType = (1) Points, if FXCMPegFluctuatePts = trailing fluctuate pts.

<peginstructions></peginstructions>							
Tag	Field Name		Req'd	Comments			
>	211	PegOffsetValue	N	Amount (signed) added to the peg for a pegged order in the context of the PegOffsetType			
\rightarrow	835	PegMoveType	N	Describes whether peg is static/fixed or floats			
\rightarrow	836	PegOffsetType	N	Type of Peg Offset (e.g. price offset, tick offset etc)			
\rightarrow	1094	PegPriceType	N	7			
\rightarrow	FXCM+61	FXCMPegFluctuate Pts	N	Specifies the number trailing stop fluctuating points			
			Pegl</td <td>nstructions></td>	nstructions>			

1.3.3. Business Message Reject

The Business Message Reject message can reject an application-level message, which fulfills session-level rules and cannot be rejected via any other means.

Tag	Field Name	FIX Req'd	Reject field set	Comments
	Standard Header	Υ		MsgType = j (lowercase)
372	RefMsgType	Υ	Υ	The MsgType of the FIX message being referenced.

2 35 of 84

379	BusinessRejectRefID	N	N	The value of the business-level "ID" field on the message being referenced. Required unless the corresponding ID field was not specified or unknown.
380	BusinessRejectReason	Υ	Υ	Code to identify reason for a Business Message Reject message.
58	Text	N	Υ	Where possible, message to explain reason for rejection
FXCM+25	FXCMRequestRejectReason	N	Υ	The code of rejection reason
FXCM+29	FXCMErrorDetails	N	Υ	Error details of server side processing
336	TradingSessionID	N	Υ	Identifier for Trading Session, "FXCM"
625	TradingSessionSubID	N	Υ	FXCM Dealing desk name
	Standard Trailer	Υ		

1.3.4. User Request

The User Request message is used to verify the user password and request a list of trading sessions.

Tag	Field Name		FIX Req'd	FXCM field set	Comments
	Standard Header		Υ	Υ	MsgType = BE
923	Use	erRequestID	Υ	Υ	Unique identifier for a User Request.
924	UserRequestType		Υ	Υ	Indicates the action required by a User Request Message, List of Trading Session (5) only
553	UserName		Υ	Υ	Login Id of trader
554	Password		N	Υ	Trader password
336	TradingSessionID		N	N	Identifier for Trading Session, "FXCM"
625	TradingSessionSubID		N	N	FXCM Dealing desk name
FXCM+16	FXCMNoParam		N	N	Specifies the number of FXCM custom session parameters, not in use for Buyer interface
\rightarrow	FXCM+17	FXCMParamName	N	N	Parameter name, not in use for Buyer interface
\rightarrow	FXCM+18	FXCMParamValue	N	N	Parameter value, not in use for Buyer interface
	Standard Trailer		Υ		·

1.3.5. User Response

The User Response message is used to respond to a user request message.

Tag	Field Name		FIX Req'd	FXCM field Set	Comments
	Sta	ndard Header	Υ		MsgType = BF
923	Us	erRequestID	Υ	Υ	Unique identifier for a User Request.
553		UserName	Υ	Y	Login Id of trader
926	l	JserStatus	N	Y	Indicates the status of a user
927	Us	erStatusText	Υ	Y	A text description associated with a user status.
386	NoTradingSessions		N	Υ	Specifies the number of repeating TradingSessionIDs. Required if this is response on "List of trading sessions"
\rightarrow	336	TradingSessionID	N	Y	Identifier for Trading Session, "FXCM"
\rightarrow	625	TradingSessionSubID	N	Y	FXCM Dealing desk name
FXCM+16	FXCMNoParam		N	N	Specifies the number of FXCM custom session parameters, not in use for Buyer interface
\rightarrow	FXCM+17	FXCMParamName	N	N	Parameter name, not in use for Buyer interface
\rightarrow	FXCM+18	FXCMParamValue	N	N	Parameter value, not in use for Buyer interface
FXCM+25	FXCMRequestRejectReason		N	Υ	The code of rejection reason
FXCM+29	FXCMErrorDetails		N	Υ	System error trace
	Sta	andard Trailer	Υ		

2 36 of 84

1.3.6. Email

The Email message is a general free format message between the dealer and trader.

Tag	Field Name	FIX Req'd	FXCM field set	Comments
	Standard Header	Y		MsgType = C
164	EmailThreadID	Y	Υ	Unique identifier for the email message thread
94	EmailType	Y	Υ	Email message type. Always "0"
42	OrigTime	N	Υ	Time of message origination
147	Subject	Υ	Υ	The subject of an Email message, "from dealer_login_id" basically
33	LinesOfText	Υ	Υ	Specifies the number of repeating lines of text specified, always one line
\rightarrow	58 Text	Y	Y	Free format text string
336	TradingSessionID	N	Y	Identifier for Trading Session, "FXCM"
625	TradingSessionSubID	N	Y	FXCM Dealing desk name
	Standard Trailer	Y		

1.3.7. Quote

The Quote message is used to re-quote a market order.

Tag	Field Name	FIX Req'd	Order Requote field set	Comments
	Standard Header	Υ		MsgType = S

FXCM+25	FXCMRequestRejectReason	N	Υ	The code of rejection reason
FXCM+29	FXCMErrorDetails	N	Υ	System error trace
	Standard Trailer	Υ		

1.3.23. Order Mass Status Request

2 50 of 84

The order mass status request message requests the status for orders matching criteria specified within the request. Matching criteria could be: FXCM party fields. Account ID, FXCM party fields. Trader Login ID, All Orders

Can also be used to request order history, which includes all execution report(s) sequentially to current. Criteria for order history is to supply one and only one of the following: ExecID, OrderID, ClordID, SecondaryClordID.

Tag	Field Name	FIX Req'd	FXCM field set	Comments
	Standard Header	Υ		MsgType = AF
584	MassStatusReqID	Υ	Y	Unique ID of mass status request as assigned by trader.
585	MassStatusReqType	Υ	Y	Not in use, always All orders (7)
	component block <parties></parties>	N	Υ	FXCM fields with matching criteria, to define "all orders" scope FXCM Acct ID and FXCM trader login id should be absent
1	Account	N	Y	Account (in use only for routing)
37	OrderID	N	N	Unique ID as assigned by FXCM
11	ClOrdID	N	N	Unique ID as assigned by Client
526	SecondaryClOrdID	N	N	Unique ID as assigned by Client
17	ExecID	N	N	Unique ID of execution message as assigned by FXCM
336	TradingSessionID	N	Υ	Identifier for Trading Session, "FXCM"
625	TradingSessionSubID	N	Υ	FXCM Dealing desk name
	Standard Trailer	Υ		

1.3.24. Request For Positions

The Request for Positions message requests the trading position status matching criteria specified within the request. The matching criteria could be:

- 1) FXCMPosID
- 2) Order ID
- 3) ClOrdID
- 4) SecondaryOrdID
- 5) FXCM party fields. Account ID
- 6) FXCM party fields. Trader Login ID
- 7) All positions

The response on "closed trades" returns no more then 30 position reports when no orderID (OrderID, ClOrdID or SecondaryClID) is specified in matching criteria.

FIX connections use this to configure subscription status for Position Report

Tag	Field Name	FIX Req'd	FXCM field set	Comments
	Standard Header	Υ	Υ	MsgType = AN
710	PosReqID	Υ	Υ	Unique identifier for the Request for Positions as assigned by the trader

1.2. How to place different order types

1. Create Previously Quoted Order

1.1. Java

```
OrderSingle orderSingle = MessageGenerator.generateOpenOrder(
    aMarketDataSnapshot.getQuoteID(),
    aMarketDataSnapshot.getAskClose(),
    acct.getAccount(),
    acct.getQuantity(),
    SideFactory.BUY,
    aMarketDataSnapshot.getInstrument().getSymbol(),
    """);
    orderSingle.setTimeInForce(TimeInForceFactory.FILL_OR_KILL);
```

1.2. FIX

 $8=FIX.4.4|9=346|35=D|34=11|49=*|52=20101109-18:49:51.739|56=FXCM|57=RAPIDDEMO|1=06005657|11=FXCM-1289328591739-10|38=100000|40=D|44=1.38224|54=1|55=EUR/USD|59=4|60=20101109-18:49:51|117=FXCMGenerated_8fb71d61-1745-ef08-c493-f180ababb40a|526=QATest.testCreatePreviouslyQuotedOrder()|386=1|336=FXCM|625=RAPIDDEMO|453=1|448=FXCM|D|447=D|452=3|10=244|$

2. Close Previously Quoted Order

2.1. **Java**

2.2 FIX

 $8=FIX.4.4|9=358|35=D|34=13|49=*|52=20101109-18:53:52.096|56=FXCM|57=RAPIDDEMO|1=06005657|11=FXCM-1289328832096-12|38=100000|40=D|44=1.38277|54=2|55=EUR/USD|59=4|60=20101109-18:53:52|117=FXCMGenerated_7696423e-eed9-471c-a260-f8be03cadce8|526=QATest.testClosePreviouslyQuotedOrder()|9041=6266909|386=1|336=FXCM|625=RAPIDDEMO|453=1|448=FXCM ID|447=D|452=3|10=089|$

3. Create True Market Order

3.1. Java

```
OrderSingle orderSingle = MessageGenerator.generateMarketOrder(
    aCollateralReport.getAccount(),
    aCollateralReport.getQuantity(),
    SideFactory.BUY,
    "EUR/USD",
    "true market order test");
```

3.2. FIX

1.3. Procedure for handling trade confirmations during high-volume trading

Upon sending an order request, a client can expect to receive several messages indicating the current status of each trade. At the end of the transaction, the client will have received **Execution Reports** (35=8), **Position Reports** (35=AP; if subscribed), and **Collateral Reports** (35=BB; if subscribed).

When a large amount of trading activity for a single account, is performed in a short time frame, a delay in certain messages may occur. These delays can affect Execution Reports containing **OrdStatus=Filled** (39=2), and **Position Reports**. However, these final messages are not needed to indicate status of trades. Instead, client can use intermediary execution reports that will indicate current status of trades.

To properly indicate that a fill occurred with a liquidity provider, client needs only to check **ExecType=Trade** (150=F), as well as certain **OrdStatus** values, found within an **Execution Report** (35=8).

Orders that are broken up into partial fills, will indicate such, via **OrdStatus=Partially Filled**(39=1). Once all execution with all external counter parties has concluded, an **Execution Report** (35=8) containing 150=F and 39=7 (**OrdStatus=Stopped**, indicating no more executions with liquidity providers) will be transmitted.

Position Reports and final Execution Reports will still be transmitted to client, once booking has been performed by FXCM onto the account, but clients do not need to wait for these to confirm status.

CONFIRMING SUCCESSFUL EXECUTION OF A TRADE

- 1. Submit Order (tag 35=D, 35=E)
- 2. Receive initial EXECUTION_REPORT (tags 35=8) containing NEW OrdStatus(39=0)

 $8=FIX.4.4|9=485|35=8|34=1248|49=FXCM|50=100KREAL|52=20120305-18:42:37.017|56=example2_client1|1=1000069987|6=1.30918|11=CLORDID_B13309729\\55338_298|14=0|15=EUR|17=0|31=1.30918|32=0|37=37109510|38=1000|{\color{red}39=0}|40=1|44=1.\\30918|54=2|55=EUR/USD|59=0|60=20120305-18:42:36|99=0|126=20120305-21:59:59|150=0|151=1000|211=0|336=FXCM|625=100KREAL|835=0|836=0|1094=0|9000$

1.4. In next versions of FXCM FIX SBI

FXCM plans to expand the Buyer Side Interface, in order to provide further reaching functionality, and to be more FIX protocol "friendly". The list of future improvements is as follows:

- 1) Market Data Request (including historical data requests)
- 2) News with news subscriptions
- 3) Support of Market Data incremental refresh
- 4) "Intermarket sweep orders" based on Reg NMS, Intermarket Sweep is an Immediate or Cancel Limit order with an ExecInst tag to designate it as Intermarket Sweep.
